

Makes life a little easier: Control of multiple models and multiple brands using one single program

Camera Control can control all the major high-speed cameras on the market, all at the same time and from one single user interface.

EASY TO OPERATE - The user-friendly interface makes it easy to record images, view live images, set parameters, perform image enhancement and automatically download. All functions can be performed simultaneously on multiple cameras from one user interface.

TEMA Camera Control is the optimal tool for controlling multiple high speed cameras of different models and different brands. TEMA

EFFECTIVE - One user interface makes the set-up easy and the time needed shorter. No need for multiple training sessions on different software.

INDEPENDENCE - Now you can choose the best camera for your applications independently of those used before. One software for all models and all brands.

INTEGRATED - TEMA Camera Control is fully integrated into the TEMA motion analysis software supplied by Image Systems. The user can start tracking and perform analysis directly after the download of an image sequence, without leaving the program.

User interface

The windows-based user interface of TEMA Camera Control gives a very flexible way of setting up a test. The operator can easily connect one or multiple cameras, record image sequences, make image improvements and save images to disk in several different image formats.

Multiple models / Multiple brands

TEMA Camera Control supports the main makes and models of digital high-speed cameras on the market and new cameras are continually added to the list of those controlled. Let us know which ones you use and we will implement the control.

Image enhancement

TEMA Camera Control has different tools available for color corrections such as brightness, contrast, gamma in each color as well as different hue and saturation.

The main tools available are White Balancing, RGB Waveform and Vector Scope, where the operator can perform image adjustments by "click and drag" in the dialog window.

Enterprise edition

The Enterprise Edition adds a set of new features to TEMA Camera Control. Features that are important for larger customer facilities distinguished by:

Pre-defined processes, Test planning systems, Subdivision of tasks, Data storage models, High throughput of tests and repetitive tests.

All these features are handled by TEMA Camera Control, Enterprise edition.

System Integration

Together with the software capability Image Systems can engineer the complete system of cabling, junction boxes, individual computers and the inter-computer communications.

Image Systems AB is your partner in motions analysis and supplies both standard products and customized projects. The standard products handles all steps in the process of digitizing cine film, controlling multiple cameras, tracking and analyzing image sequences and present result. The company has long experience of customized projects. A typical project includes software development, integration into current systems, installation, acceptance testing, training and maintenance.
